

Cotemar: Zero emissions by 2050

March 5th of 2024.

Mexico City, Mexico.- Coincident with the global initiative to reduce emissions of environmental pollution and consistent with its sustainability approach, Grupo Cotemar began a decarbonization project two years ago, known as Net Zero Emissions, with the aim of undertaking all the necessary actions to reduce polluting emissions to zero or, otherwise, compensate them by 2050.

The path to decarbonization began with the development of a diagnosis that included mapping of climate-related risks and opportunities. Subsequently, the participation of SDG Ambitions, an accelerator program for the UN Sustainable Development Goals, was integrated. With this, the company formalized its commitment to reduce and compensate direct greenhouse gas (GHG) emissions by 2030.

A priority area for attention is vessels, due to their diesel consumption. Among the measures adopted are improvement in the maintenance of vessels, as well as changing luminaires for LED lights, which reduces fuel consumption.

To have renewable and clean energy, photovoltaic panels were placed in the administrative facilities of Grupo Cotemar in Ciudad del Carmen. In total, it is equivalent to an estimated annual generation of more than 497 thousand kilowatts, avoiding the emission of more than 244 tons of carbon dioxide, achieving significant savings in electricity consumption. Likewise, Cotemar has installed a total of 1,992 solar panels in six land locations in Ciudad del Carmen, Campeche, seeking to achieve energy cost savings of between 15 and 20% in the current consumption.

With the project, seven hundred thousand kilowatts of green energy have been generated with a favorable impact emission of 316 tCO² eq. Considering that, to eliminate one ton of carbon dioxide, between 31 and 46 trees are required, Cotemar's environmentally responsible actions are equivalent to what a forest of 9,700 to 14,500 trees would do.

For more than 44 years, sustainability has been one of our strategic objectives as a company. We are permanently committed to caring for the environment, the well-being of our people, as well as the development of the communities in which we operate.
